Castlegate James Brewer's Select is a palatable, sweet tasting premium stock feed blend ensiled in round bales. Being ensiled in plastic wrapped bales aids in the controlled microbial fermentation of brewer's grains in order to preserve the nutritive value all year round.

Suitable for:

Brewer's Select

Brewer's Select consists of a unique blend of ingredients that encourages dry matter intake which is critical for higher milk production and live weight gains.

Brewer's Select is a premium stock feed high in protein for improved milk production and reproductive tract reconditioning after calving that also supports muscle growth in young cattle. Brewer's Select ensures a consistent source of nutrients, no separation and is ready to use.

Brewer's Select as a high fibre feed, can be used as a spring grazing buffer feed or forage replacer/extender. The medium oil content and effective fibre sources from malt culms and barley screenings with bread product based starch sources will benefit diets short of fermentable energy.

The useful protein content as well as a good fibre content makes it ideal to use as a forage extender when fed at high levels if forage is short or expensive.

When fed at lower feeding rates Brewer's Select can make a very cost effective protein contribution to most diets.

Conveniently Packaged

Brewer's Select is ensiled in plastic wrapped bales which aids the controlled microbial fermentation of brewer's grains. This helps to preserve the nutritive value of the blend all year round.

The compact 750kg bale size makes it more convenient with ordering, delivery and moving bales around the farm

- More flexibility to feed as required
- Can order and deliver smaller loads
- More convenient to move bales around the farm
- Greater shelf life
- Easier to store

Feeding guide

Brewer's Select is suitable for all ruminating animals.

Beef Cattle: Up to 20kgs/head/day

Dairy Cattle: Up to 20kgs/head/day

Sheep & Goats: Up to 2kgs/head/day

We also recommend access to good quality pasture and fresh water at all times.

Availability & storage

Available all year round. Recommend to feed in a simple ring feeder (< 10% losses compared to 50% loss if fed on the ground).

For storing, round bales should not be stacked on top of each other since it will 'squash' the bale and lose the integrity of the seal. Regularly check and repair any holes immediately. Once opened Brewer's Select bales should be eaten within 14 days depending on the prevailing conditions.

Additional notes

This information should be used as a general guide only. Please consult with your nutritional advisor to determine the appropriate needs for your animals.
