A high energy baked co-product feed suitable for feeding growing pigs and lactating sows.

It will increase the energy density of all diets, making it an excellent feed for fattening pigs. Biscuit Meal has an appreciable starch and sugar content that will enrich the energy supply of most diets.

Biscuit Meal is an excellent grain replacement in monogastric diets especially in grower and finisher diets. Attributes for Biscuit Meal are high starch, high oil, low fibre and useful protein with improved starch digestibility due to gelatinisation from the baking process.

Biscuit Meal is recommended for early piglet diets as starch gelatinisation improves the nutritive value while it can reduce the anti-nutritional effects of non-starch polysaccharides.

Biscuit Meal enhances the palatability and digestibility of piglet diets therefore usually shows enhanced performance compared to piglets when fed diets based on wheat.

Feeding Guide

- Very useful in pig diets especially for young pigs (palatability and digestibility) and for lactating sows (promoting intake)
- Recommendation of 20% of Dry Matter Intake for young growing pigs and 25% of Dry Matter Intake for Finishers and Sows

Additional notes

The above information is to be used as a guide only and not to be used as the basis for recommendations.

Ensure clean fresh drinking water are always available.

Please consult with your nutritional advisor to determine the appropriate inclusion rates for your nutritional situation.

This product does not contain restricted animal material.
