Castlegate James Energy Booster provides the perfect blend of starches, sugars, fats and digestible fibre to support and maintain rumen health and digestion. This unique high energy co-product feed is perfect for sheep, dairy cows, beef cattle and pigs.

Energy Booster

Formulating the correct amount of energy for a ration can be a difficult and costly process. Incorporating Energy Booster into feeding systems is a cost-effective way of improving production efficiency.

High Level of Energy

Energy Booster is a valuable energy source, similar to the levels found in most grains for ruminants.

Complements high protein grasses

Energy Booster's highly soluble sugars and fibre break-down at the same rate as the soluble protein in pasture grasses, therefore improving utilisation and efficiency.

Easy To Use

Energy Booster requires no further processing or un-packing.

Highly Palatable

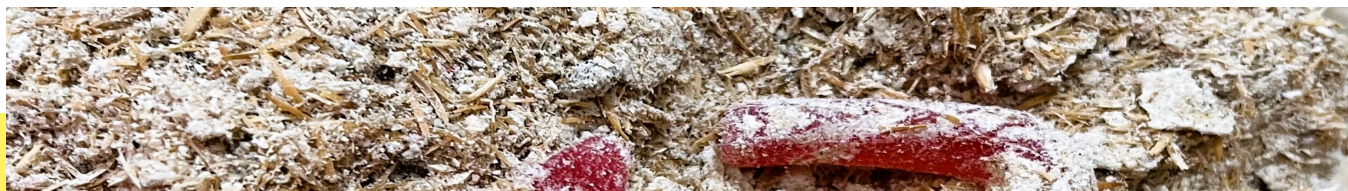

Cattle, sheep and pigs readily consume Energy Booster due to its high sugar content.

High Levels of Starch and Sugar.

Energy Booster is made up of highly soluble sugars. Soluble sugars, cell-wall carbohydrates from fibre together with soluble protein from pasture grasses are completely degraded in the rumen at the same rate, therefore improving utilisation and efficiency of feed.

The rapidly fermentable carbohydrates from the sugars and starches in Energy Booster are highly effective when compared with other carbohydrate sources, such as cellulose in promoting microbial growth.

Additional notes

This information should be used as a general guide only. Please consult with your nutritional advisor to determine the appropriate needs for your animals.
