Castlegate James Mill Mix is produced from the milling of wheat for flour and is widely used in dairy, beef, pig and poultry rations as well as supplementary feeding

Suitable for:

Valuable source of protein

The protein content of Mill Mix is a very good silage extender or grain replacer

Excellent source of essential nutrients

Mill Mix consists of bran, aleurone, germ and pollard fractions. The germ is also an excellent source of fat, fat-soluble vitamins (A,D,E,K) and minerals.

Lower risk of digestive disturbance

Higher levels of fibre and together with lower levels of starch reduce the risk of digestive upsets.

Economically & Competitive

Mill mix is an economically competitive source of protein and energy and requires no additional processing.

Feeding guide

Mill Mix is typically fed up to 5kg per cow per day in Total Mixed Rations. Mill Mix can easily be incorporated into both beef and dairy cattle diets.

Availability

Mill Mix is available on a long term and regular basis for customers wish to secure an ongoing supply. Customers can choose to purchase Mill Mix on a spot basis subject to availability or enter a contract to ensure guaranteed supply.

Additional notes
