Suitable for:

Proteena[®] Advanced Protein pellets are a high protein stock feed specifically designed to supplement cattle when pasture quality is sub-optimum. Proteena[®] Advanced Protein pellets have been formulated to ensure your herd's productivity can be maintained all year round.

Proteena® Advance Protein Pellet

High Protein Content

Proteena® Advanced Protein pellets contain 18% protein to supplement poor quality pastures and silage. With added Urea (a non-protein nitrogen source) to assist the highly soluble sugars within the feed, supplying rumen microbes with protein and energy simultaneously promoting better performance in weight gain or milk production.

Excellent Nutritional Source

Contains a full complement of macro minerals, vitamins and trace elements as well as rumen buffer, Monensin and biotin as standard inclusions.

Unique Energy Source Blend

The balanced starch, sugar and fat content provide a safe feed with a reduced risk of acidosis, without sacrificing live weight gain or milk production.

Added Bypass Protein.

Added Canola Meal provides an additional source of bypass protein to the animal that will increase dry matter intake and overall productivity.

Improved Utilisation.

The inclusion of cooked cereal grains contribute higher levels of gelatinised starch, together with steam conditioning in the production process, further gelatinises the starch content, thereby improving digestion and feed efficiency.

Sweet, Palatable Taste

Encourage dry matter intake crucial for increasing milk production and live weight gain.

Consistent

Proteena® Advanced Protein pellets ensure a consistent source of nutrients, excellent pellet integrity ensures very little pellet breakages and separation fines and are ready to use.

Feeding guide

Proteena® Advanced Protein pellets are designed to feed up to 40% (max) of your herd's dry matter intake in pasture based system.

For Dairy Cattle: (Recommended daily intake up to 30% of total Dry Matter Intake (DMI))

Dry Matter Intake (DMI) of a 500 kg cow (4% of body weight) = 20 kg DMI/day
 $20 \times 30\% = 6\text{kg}$ on a Dry Matter (DM) basis
 As fed (As Is): 6.7kg/day

We also recommend access to good quality pasture and fresh water at all times.

Availability

Proteena® Advanced Protein pellets are available on a long term and regular basis for customers wishing to secure an ongoing supply. Customers can choose to purchase Proteena® Advanced Protein pellets on a spot basis subject to availability or enter a contract ensuring guaranteed supply.

Additional notes

This information should be used as a general guide only. Please consult with your nutritional advisor to determine the appropriate needs for you animals.

This product does not contain restricted animal material.
