Suitable for:

Formulated using co-product ingredients from the bakery and beer brewing industry. Proteena[®] Lamb Grower Pellets are a high protein stockfeed specifically designed to supplement growing lambs when pasture quality is sub optimum. It is designed to supplement both pasture or paddock feed situations.

Proteena® Lamb Grower Pellets

Proteena® Lamb Grower Pellets is specially formulated using co-product ingredients from the bakery and beer brewing industries. It's a high protein and high energy feed from starch and sugar feed sources with valuable protein content that stimulate early feed intake for rumen development.

Proteena® Lamb Grower Pellets contains 18% Crude Protein to supplement poorer quality pasture while also reduce dependence on the mothering ewe especially if lambs are twins.

Proteena® Lamb Grower Pellets does not contain urea.

High Quality Ingredients

Processed Bread. This is used readily in ruminant diets as a grain replacement. It has all the attributes of wheat flour in terms of high starch, low fibre and useful protein with the improved digestibility from the cooking (gelatinisation).

As part of a blend it is an excellent feedstuff with little restriction. It effectively replace the entire grain component.

Malt Comblings. These are the emerging shoots of the germinating barley during malting and are brushed from the seed after heating. These shoots are high in protein (25 % Crude Protein) and fibre (40% NDF) but low in starch and sugars.

Maltings. Mainly from barley or malt screenings.

With an added benefit as a fibre source substituting mainly oat hulls, almond shells.

Feeding guide

Start lambs on 50 grams of pellets / head / day until all the lambs in the group consume 50 grams. Gradually increase the amount of pellets incrementally until all lambs consume 2% – 2.5% of their live weight on pellets (60% of total daily intake).

Lambs not accustomed to grains must be gradually introduced to the high-grain diet of the grower pellet ration.

Ensure a good quality fibre source (hay or straw) is always available.

A minimum 14-day changeover period is needed to ensure that lambs do not suffer from digestive disorders.

Clean, fresh water should be available at all times. Never introduce feed ad lib to starving / hungry lambs.

Proteena® Lamb Grower Pellets allows lambs to become accustomed to the high grain content of **Proteena® Lamb Finisher Pellets**, while minimising the risk of grain poisoning.

Additional notes

This information should be used as a general guide only.

Please consult with your nutritional advisor to determine the appropriate needs for your animals.

This product does not contain restricted animal material.
