Suitable for:

Specially formulated Proteena[®] Sheep & Cattle Sustain pellets are perfectly suited to sheep and cattle on less than favourable pasture or when transition into feedlots. A highly palatable, highly digestible feed made with a unique blend of starches, sugars, fats and fibres, Proteena[®] Sheep & Cattle Sustain pellets are ideal for managing body score under challenging conditions.

Proteena® Sheep & Cattle Sustain Pellets

A Rounded Nutritional Source

Proteena® Sheep & Cattle Sustain pellets contain a full complement of macro minerals, vitamins and trace elements as standard inclusions. As well as rumen buffer to reduce the risk of acidosis, ammonium chloride is included to reduce the risk of urinary calculi (water belly) as well as ionophore to improve live weight gain and feed conversion

Unique Energy Source Blend

The balanced starch, sugar and fat content provide a safe feed with a reduced risk of acidosis.

Improved Utilisation

The inclusion of cooked cereal grains contribute higher levels of gelatinised starch, together with the steam conditioning of Proteena® Pellets in the production process, further gelatinises the starch content, thereby improving digestion and feed efficiency.

Sweet, Palatable Taste

Proteena® Sheep & Cattle Sustain pellets consist of unique ingredients that produce a sweet, palatable taste that encourages dry matter intake which is critical to maintain live weight.

Consistent

Proteena® Sheep & Cattle Sustain pellets ensure a consistent source of nutrients, no separation and are ready to eat.

Feeding guide

Proteena® Sheep & Cattle Sustain pellets are designed to feed up to 40% (max) of your flock's or cattle herd's dry matter intake in pasture based system.

For Lambs: (Recommended daily intake up to 40% of total Dry Matter Intake (DMI))

Total Dry Matter Intake (DMI) of 20 - 50 kg lambs (2.5% of body weight) = 500g - 1.25k g DMI/day

500g - 1.25 kg x 40% = 200g - 500g on a Dry Matter (DM) basis

As fed (As Is): 320g - 550 g/day

For Cattle: (Recommended daily intake up to 40% of total Dry Matter Intake (DMI))

Dry Matter Intake (DMI) of 500kg steer

(2.5% of body weight) = 12.5kg Total DMI/day

12.50kg x 40% = 5kg on a Dry Matter (DM) basis

As fed (As Is): 5.5 kg /day

We also recommend access to good quality fresh water at all times.

* Approximate values and should only be used as a guide depending on pasture quality and animal condition

Availability

Proteena® Sheep & Cattle Sustain pellets are available on a long term and regular basis for customers wishing to secure an ongoing supply. Customers can choose to purchase Proteena® Sheep & Cattle Sustain pellets on a spot basis subject to availability or enter a contract ensuring guaranteed supply.

Additional notes

This is not a complete feed. it must be fed with hay, silage and / or quality pasture
